JDIX Product Introduction

- TFL Reviewer (runs on JDIM™)
- JDIM™
- JDIQ™

Janus Data Intelligence (JDIX)

Clinical Trial Data Processing Automation and Intelligence

2024 Founded

Founded in 2024

17+ Years

Incubated from Q2BI, a Biometrics CRO with over 17 years of experience

12 Clients

Obtained 12 enterprise clients in the first year of operation

2 Products

Developed 2 core products – JDIQ™ and JDIM™

Core Products

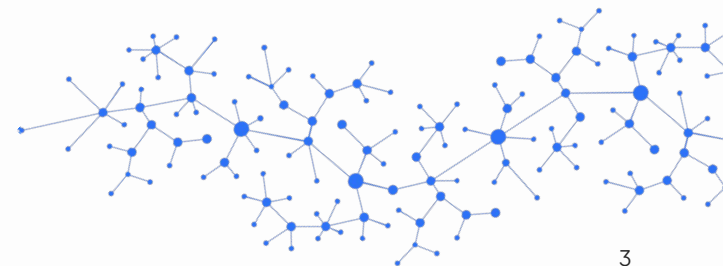

JDIQ™ — a workflow and visualization platform for high-quality decision making

JDIM™ — a multi-agent platform for clinical data processing

Question for Statisticians

How much of your time is spent reviewing TFLs instead of doing actual statistical analysis?

TFL Reviewer

An AI Agent for Statisticians

TFL Reviewer is an AI agent built on JDIM™, purpose-designed for statisticians to streamline tedious and time-intensive TFL review processes. It systematically reviews every TFL package submitted by statistical programmers, cross-checking outputs against the SAP, specifications, shells, reports, and SAS programs to identify inconsistencies and potential issues before they become downstream problems.

JDIX TFL Reviewer

Deliver

Think about This

LLM is the new operating system. The right way to build AI products is not to embed AI into the product, it is to build the product on top of AI.

JDIM™ – General Purpose Multi-Agent Platform

The Side-by-Side Comparison Between JDIM™ & Microsoft Copilot

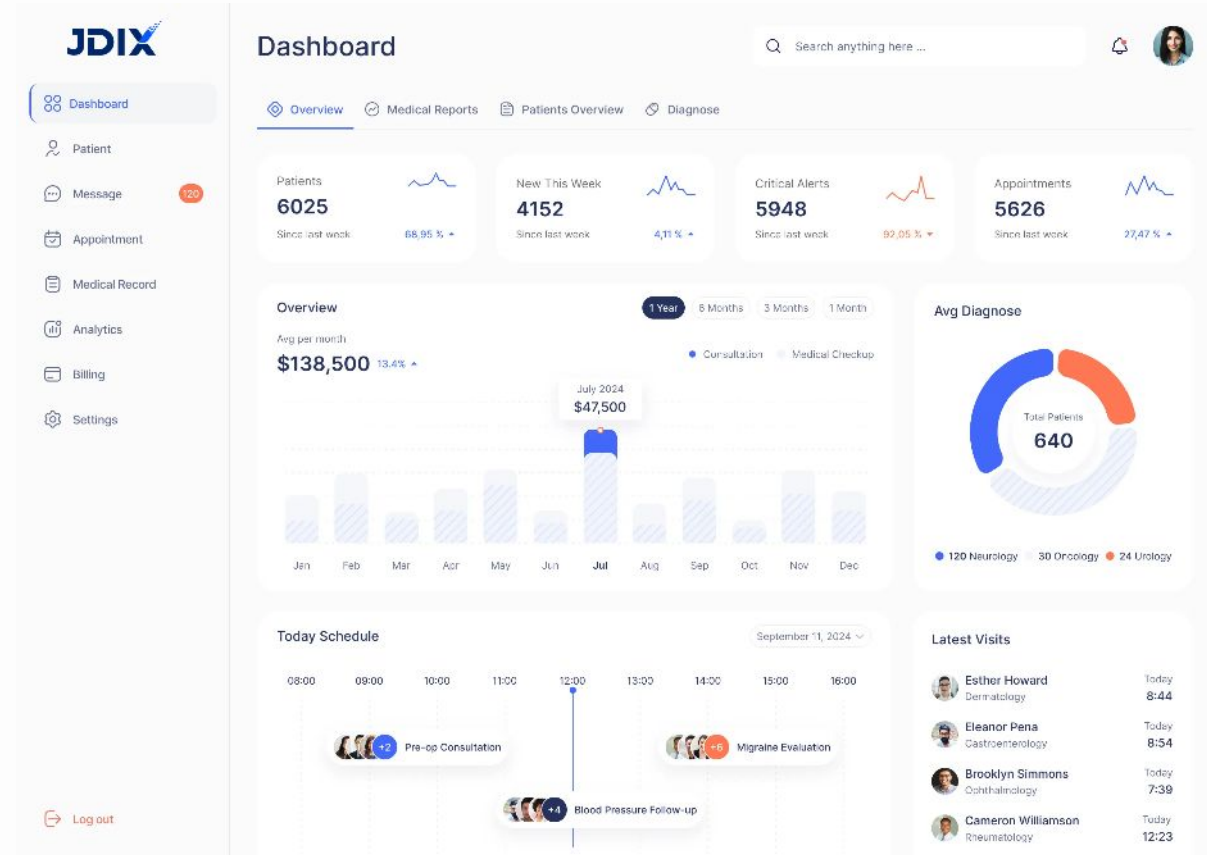

- **Open, customizable platform** powered by specialized clinical skills and domain knowledge
- **LLM-agnostic** — compatible with Claude, GPT, Gemini, or private in-house models
- Built for **broad industry adoption** — enabling company-wide, bottom-up AI transformation
- **30+ proprietary AI skills** designed for clinical workflows
- Supports **multiple use cases**, including research, programming, medical writing, review, web operations, and more
- Designed to **think differently** from **general-purpose AI systems**

JDIQ™: High Quality Decision Making Platform

Visualization, Workflow, Decision Making

- Designed for **multiple roles** – including medical monitoring, data management, and executive leadership, etc.
- Combines **visualization, workflow automation, and decision intelligence**
- Built as an **AI-native platform**
 - Enables programming-driven intelligence and responses
 - Translates natural language into actionable UI workflows
 - Embeds JDIX Agents directly within the study environment
