

From Pilots to Production: What Comes After the AI Experiment

Taimei Technology | BBSW AI Solution Summit | May 15, 2026

The Pilot Works. The Transformation Doesn't. Here's Why.

01

Spaghetti integrations.

Your teams are running AI pilots on top of disconnected legacy systems — EDC, CTMS, safety databases, statistical environments — none of which were designed to talk to each other. The pilot works in isolation. The moment you try to scale it, the integration complexity kills it.

02

Data that can't travel.

Clinical data sits in silos across systems, teams, and geographies. AI can't learn across the portfolio if the data is fragmented. Every pilot starts from scratch because there's no unified data layer underneath it.

03

Vendors, not partners.

Most AI vendors sell you a tool and leave. They don't embed in your workflow. They don't adapt to your SOPs. They don't help you figure out which problem to solve first. So even when the technology is good, the organizational transformation never happens.

When AI Meets Real Clinical Workflow

Automating routine analyses

Statistical programming code for 95% of standard methods, auto-generated. What used to take a senior programmer days now takes hours — with built-in validation and full traceability.

Real-time data quality monitoring

Safety signals surfaced in real time, not after the fact. One unified view across EDC, labs, and safety systems. Medical review that's proactive, not reactive.

Regulatory document generation

CRF design and EDC build completed in days, not weeks. CDISC-compliant from day one. Protocol-to-eCRF conversion driven by AI, not manual formatting.

One Partner. Three Ways to Work.

PATH 1: EVOLVE Optimize What You Have

For organizations with defined KPIs looking to improve speed and reduce cost without disrupting existing workflows. We deploy proven, off-the-shelf AI solutions, customize them to your environment, and validate with a shadow trial before scaling.

PATH 2: REIMAGINE Build What's Next

For organizations ready to rethink their operating model. We embed with your team through a discovery-first methodology, co-develop the vision, and build from validated insights — not assumptions. Taimei can lead end-to-end, or work alongside your existing technology partners.

PATH 3: ACCELERATE Move Fast, Learn Faster

For agile biotechs and innovation-led teams who need results in weeks, not quarters. Fast, iterative cycles — test, learn, build, scale — with a working pilot before any long-term commitment. Particularly powerful for organizations exploring APAC clinical operations where Taimei's deep regional expertise removes the learning curve.

One Platform. Three Modules. Built to Work With the World You Already Have.

FORGE

Intelligent Study Setup

Automates CRF design and EDC build. AI parses protocols directly into CDISC-compliant eCRFs. One-click EDC deployment. CRF design completed 70% faster — weeks reduced to days. EDC cycle time reduced by 70%. 90%+ CDASH/SDTM accuracy.

PULSE

Actionable Medical Intelligence

Integrates multi-source data (EDC, labs, safety systems) into a single real-time view. AI-powered medical review and safety signal monitoring. Automated report generation reduces preparation time by 70%. Shared dashboards align global and local teams instantly.

INSIGHT

AI-Powered Statistical Programming

Generates SAS/TFL code covering 95% of common statistical methods. 60–80% improvement in programming efficiency. Human-in-the-Loop mechanism ensures full controllability and regulatory compliance. Private knowledge repository transforms your team's historical logic into reusable automated assets.

All three modules run on HORIZON — a modular, API-first platform that integrates with your existing EDC, CTMS, and legacy systems. No rip-and-replace. CDISC, FDA, and EMA aligned. Data centers in US, EU, and APAC. Deploy one module to solve an immediate pain point, or scale the full ecosystem.

See It Work: AI-Powered Statistical Programming

01

Setup (~30 sec)

"Let me show you what this looks like in practice. I'm going to upload a statistical analysis plan — the kind of document your teams work with every day — and show you what INSIGHT does with it."

02

Input (~30 sec)

Upload SAP or natural language spec. Show the interface.

03

Generation (~1 min)

Trigger TFL code generation. Narrate what's happening — AI is parsing the analysis requirements, referencing the integrated knowledge base, generating SAS/TFL code.

04

Output walkthrough (~1.5 min)

Show generated code. Highlight CDISC/SDTM compliance markers. Show the traceability — where each code block came from (knowledge base reference, algorithm logic, parameter settings). **Emphasize: this is not a black box.**

05

Human-in-the-Loop (~1 min)

Show the review/refinement interface. "Average review time is 6–10 minutes per TFL. The AI does the heavy lift. Your programmer validates and refines. This is a copilot, not an autopilot."

06

Close (~30 sec)

"What you just saw would have taken a senior programmer several days. INSIGHT completed it in minutes. And in the case study I'm about to show you, we validated this at enterprise scale."

From Manual Programming to AI-Powered Statistical Analysis

CLIENT

Top 10 global MNC pharmaceutical company. Hundreds of global and regional clinical studies annually. Massive volumes of clinical research data requiring substantial human resources for statistical analysis workflows.

CHALLENGE

Traditional statistical programming was slow, labor-intensive, and difficult to standardize across teams. Manual TFL generation consumed days of senior programmer time per study. The organization needed an AI transformation that could deliver speed without sacrificing compliance, traceability, or regulatory readiness.

WHAT TAIMEI DELIVERED

A co-designed AI-powered statistical programming product with three core design pillars: a TFL Code Co-Pilot for intelligent code generation with human-in-the-loop collaboration; full interpretability with complete traceability of every code generation step; and integrated data governance aligned to CDISC standards and the MNC's internal specifications. Phased implementation: Phase 1 focused on core technology verification, Phase 2 on complex scenario expansion, Phase 3 on full TFL automation and Copilot integration.

PHASE 1 RESULTS (Launched May 2025):

- ✓ 200 TFLs: first-pass generation completed in **under 2 hours** (vs. several days manually)
- ✓ Code accuracy: **~80%** (exceeding the 70% verification threshold)
- ✓ Manual work reduction: **80%**
- ✓ Average TFL review time: **6–10 minutes**
- ✓ Seamless integration with the MNC's existing digital platform — no workflow disruption

What Only Taimei Brings to This Room

A partnership model, not a product license.

Three ways to work. We adapt to your organization — not the other way around. Whether you want to optimize incrementally, reimagine from scratch, or move fast and iterate, we have a proven model for each. Every engagement is milestone-gated so you stay in control.

The deepest APAC clinical research expertise in the market.

12 years. 1,600 clients. 10,000+ clinical research projects. Nearly 6 years of continuous AI development specific to clinical research. We're not entering this space — we've been building in it longer than most vendors have existed. For organizations running trials in Asia-Pacific, we eliminate the learning curve.

A platform that integrates — not replaces — your existing world.

HORIZON is modular and API-first. It plugs into your EDC, CTMS, and legacy systems. You deploy one module, prove the value, and expand when you're ready. CDISC, FDA, and EMA aligned, with data centers in US, EU, and APAC.

One Conversation. One Problem Worth Solving. One Clear Next Step.

You don't need to commit to a three-year transformation today.
You need a reason to have the next conversation.

Pick one problem that's costing your team time, money, or quality right now. Sit with us for a 30-minute discovery session. We'll scope a focused pilot and have a concrete proposal back to you within two weeks.

No long procurement cycle. No multi-year commitment required to start.
Just a fast, low-risk way to see if we're the right partner.
